VISA

Fraedom Expense Management

Role: Senior UX designer

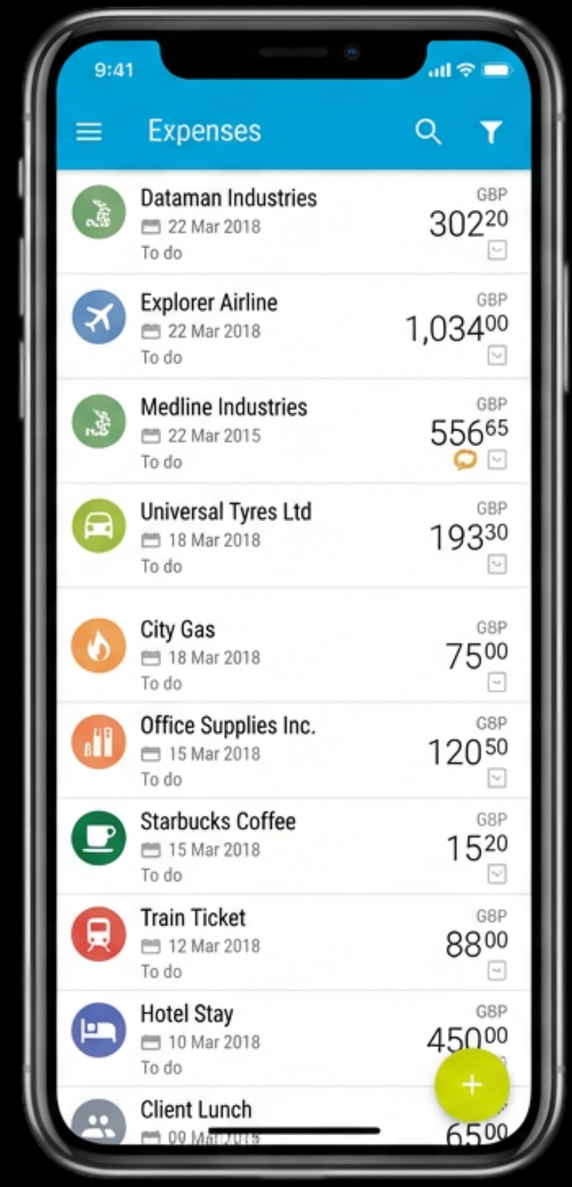
Auckland, New Zealand

Oct 2018 – Sep 2019

I owned key interaction models and usability outcomes while collaborating with Product, Engineering, and Compliance stakeholders.

CHALLENGE

This was not a visual redesign challenge — it was a behavioral systems problem addressed through UX design and interaction modeling.



LUIS SUAREZ

Behavioral Insights

Approval mental model:
Users approve only after verifying meaningful information

100% of users
Notifications based on user behavior reached

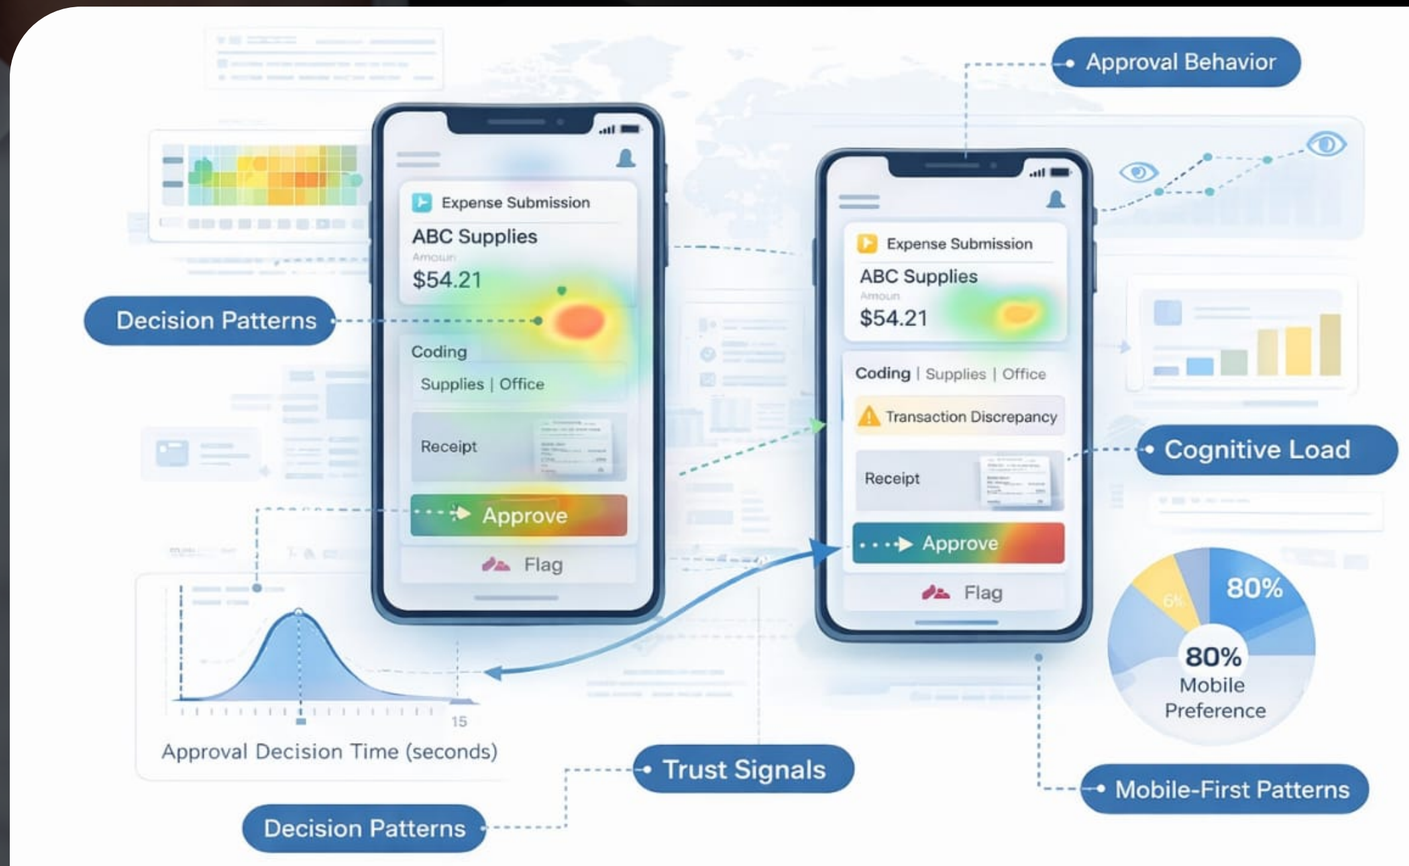
80%
Of users preferred completing processes on mobile devices

4 out of 5 users
Required clearer communication around transaction discrepancies

Critical decision data:
Description, Coding, Receipt

15 sec.
Average approval decision time

Based on usability testing and behavioral analysis conducted with cross-functional teams



LUIS SUAREZ

Usability Findings

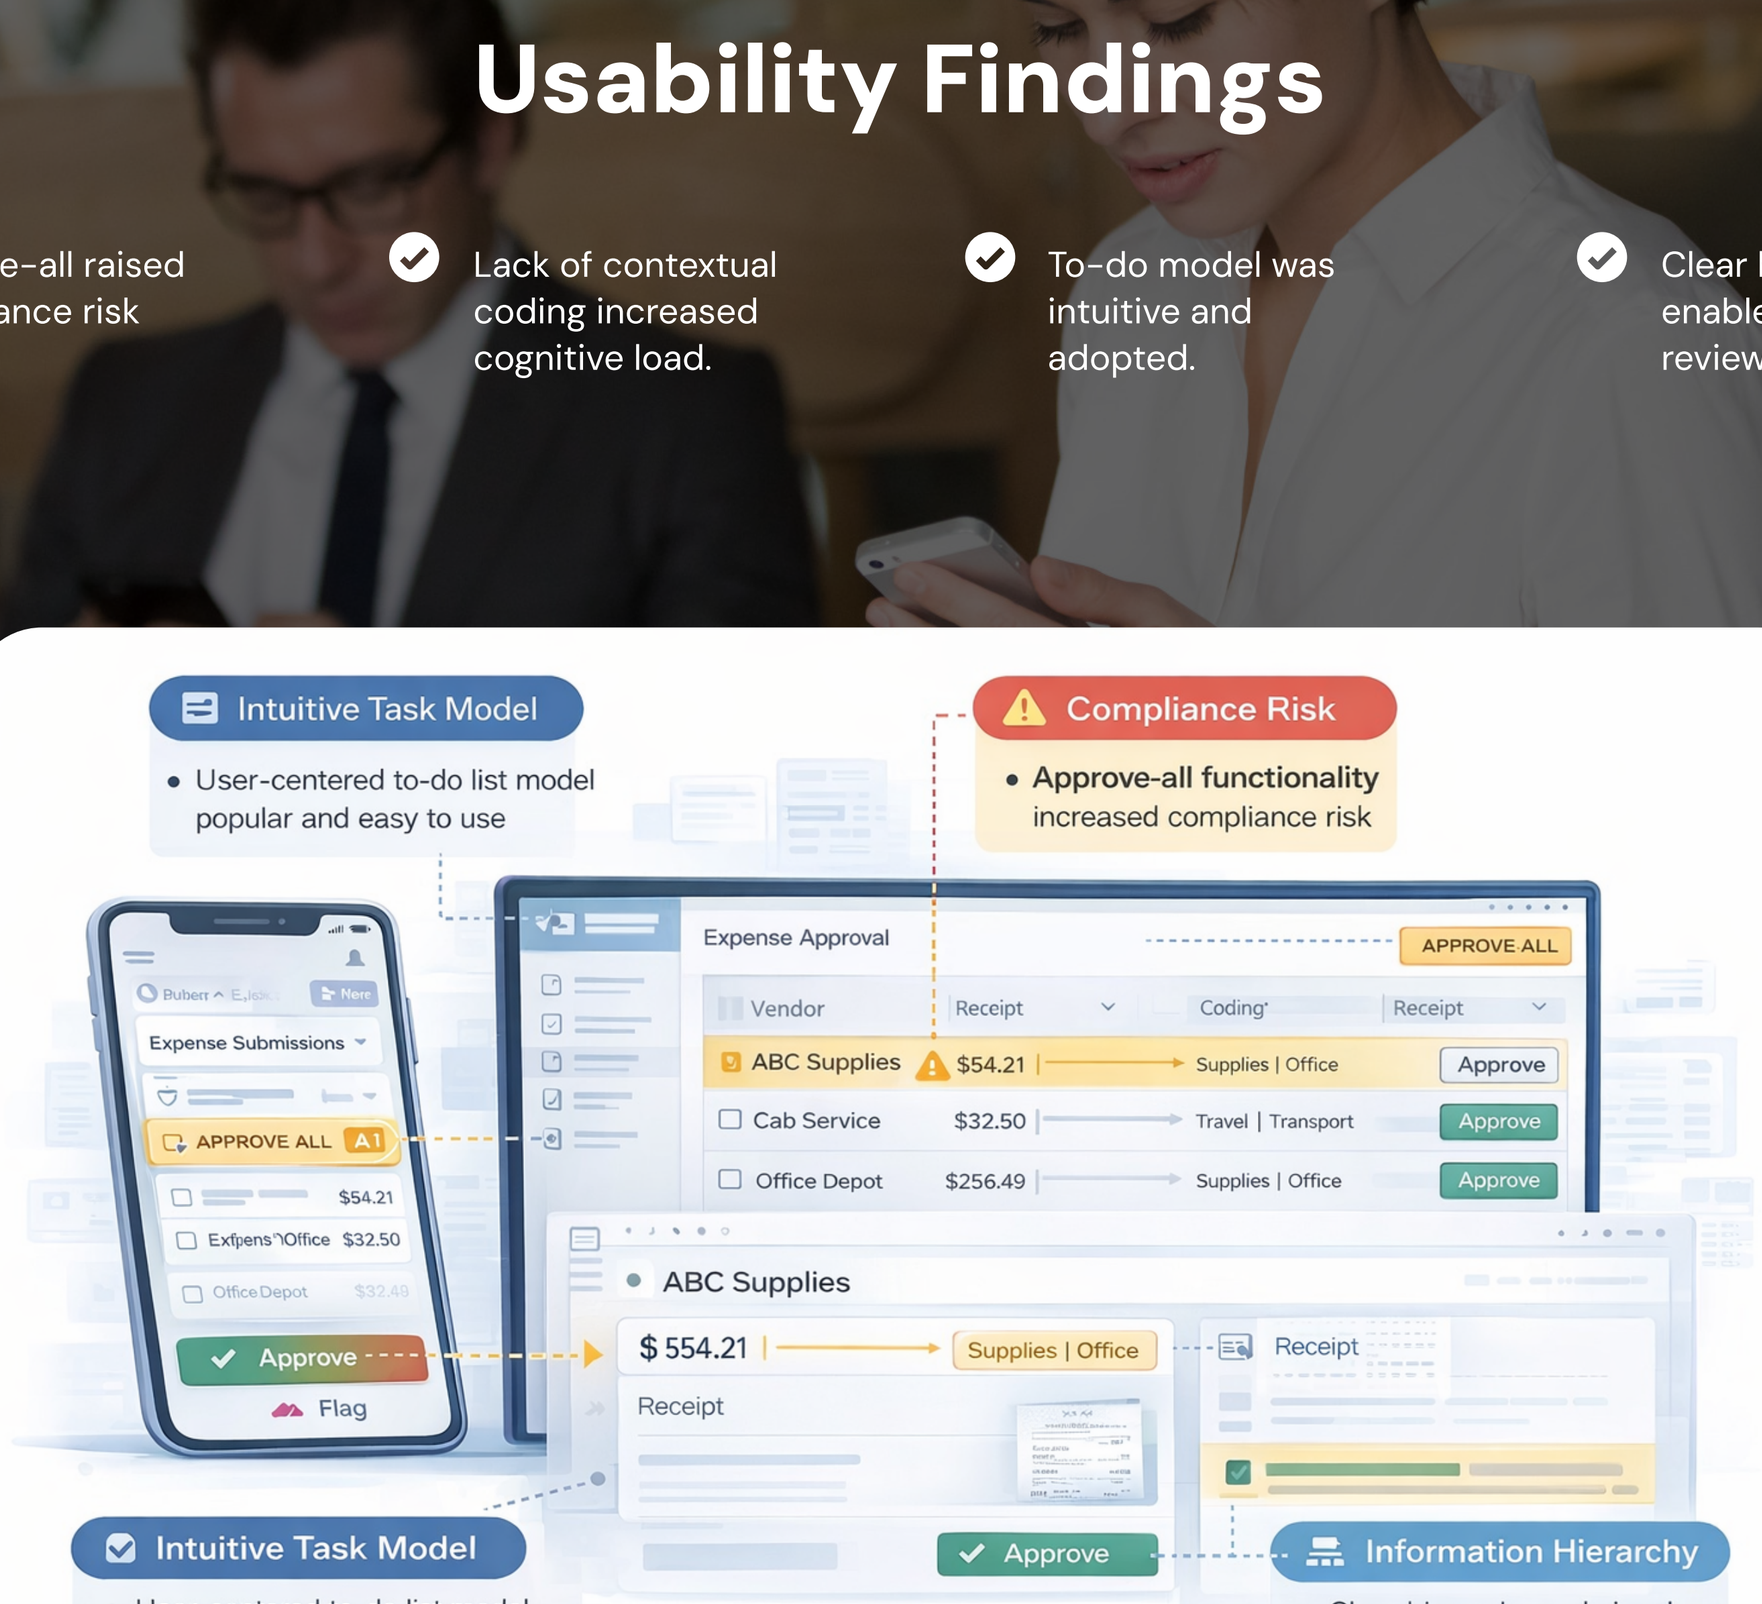
- Approve-all raised compliance risk
- Lack of contextual coding increased cognitive load.
- To-do model was intuitive and adopted.
- Clear hierarchy enabled fast initial review.

Intuitive Task Model

- User-centered to-do list model popular and easy to use

Compliance Risk

- **Approve-all functionality** increased compliance risk



Intuitive Task Model

- User-centered to-do list model popular and easy to use

Information Hierarchy

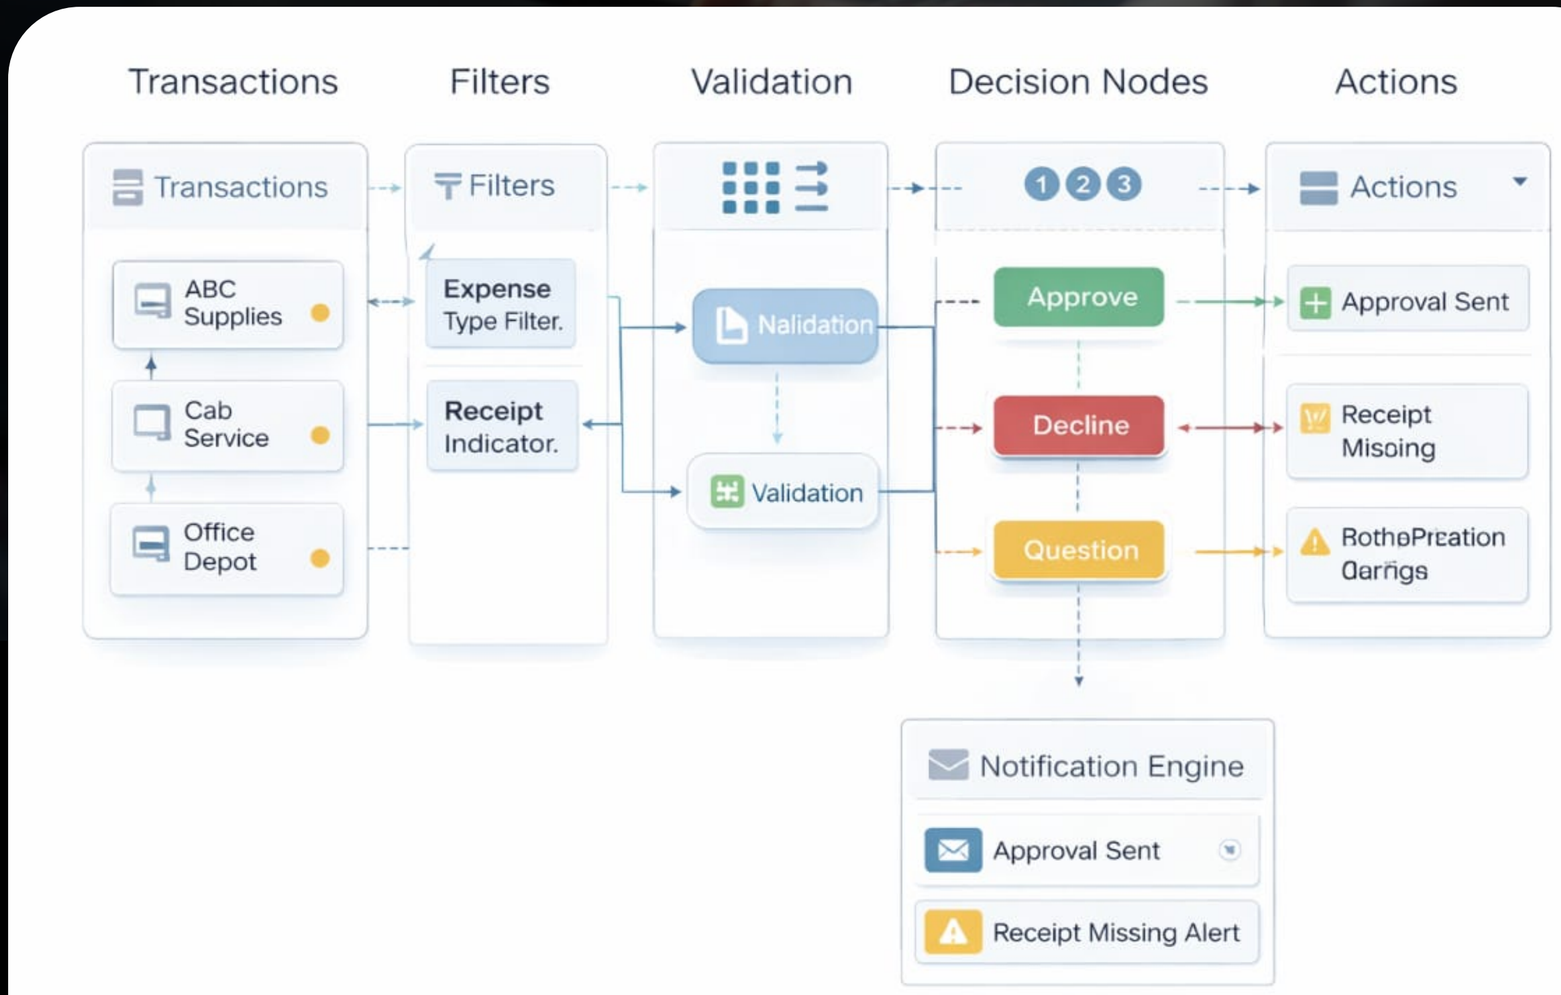
- Clear hierarchy and visual structure reduced review time

LUIS SUAREZ

Product decisions

- Designed and validated structured expense-type filtering
- Implemented receipt visibility indicators per transaction
- Designed per-transaction Approve / Decline / Question actions
- Designed interaction patterns for controlled bulk approval
- Collaborated on behavior-driven notification logic

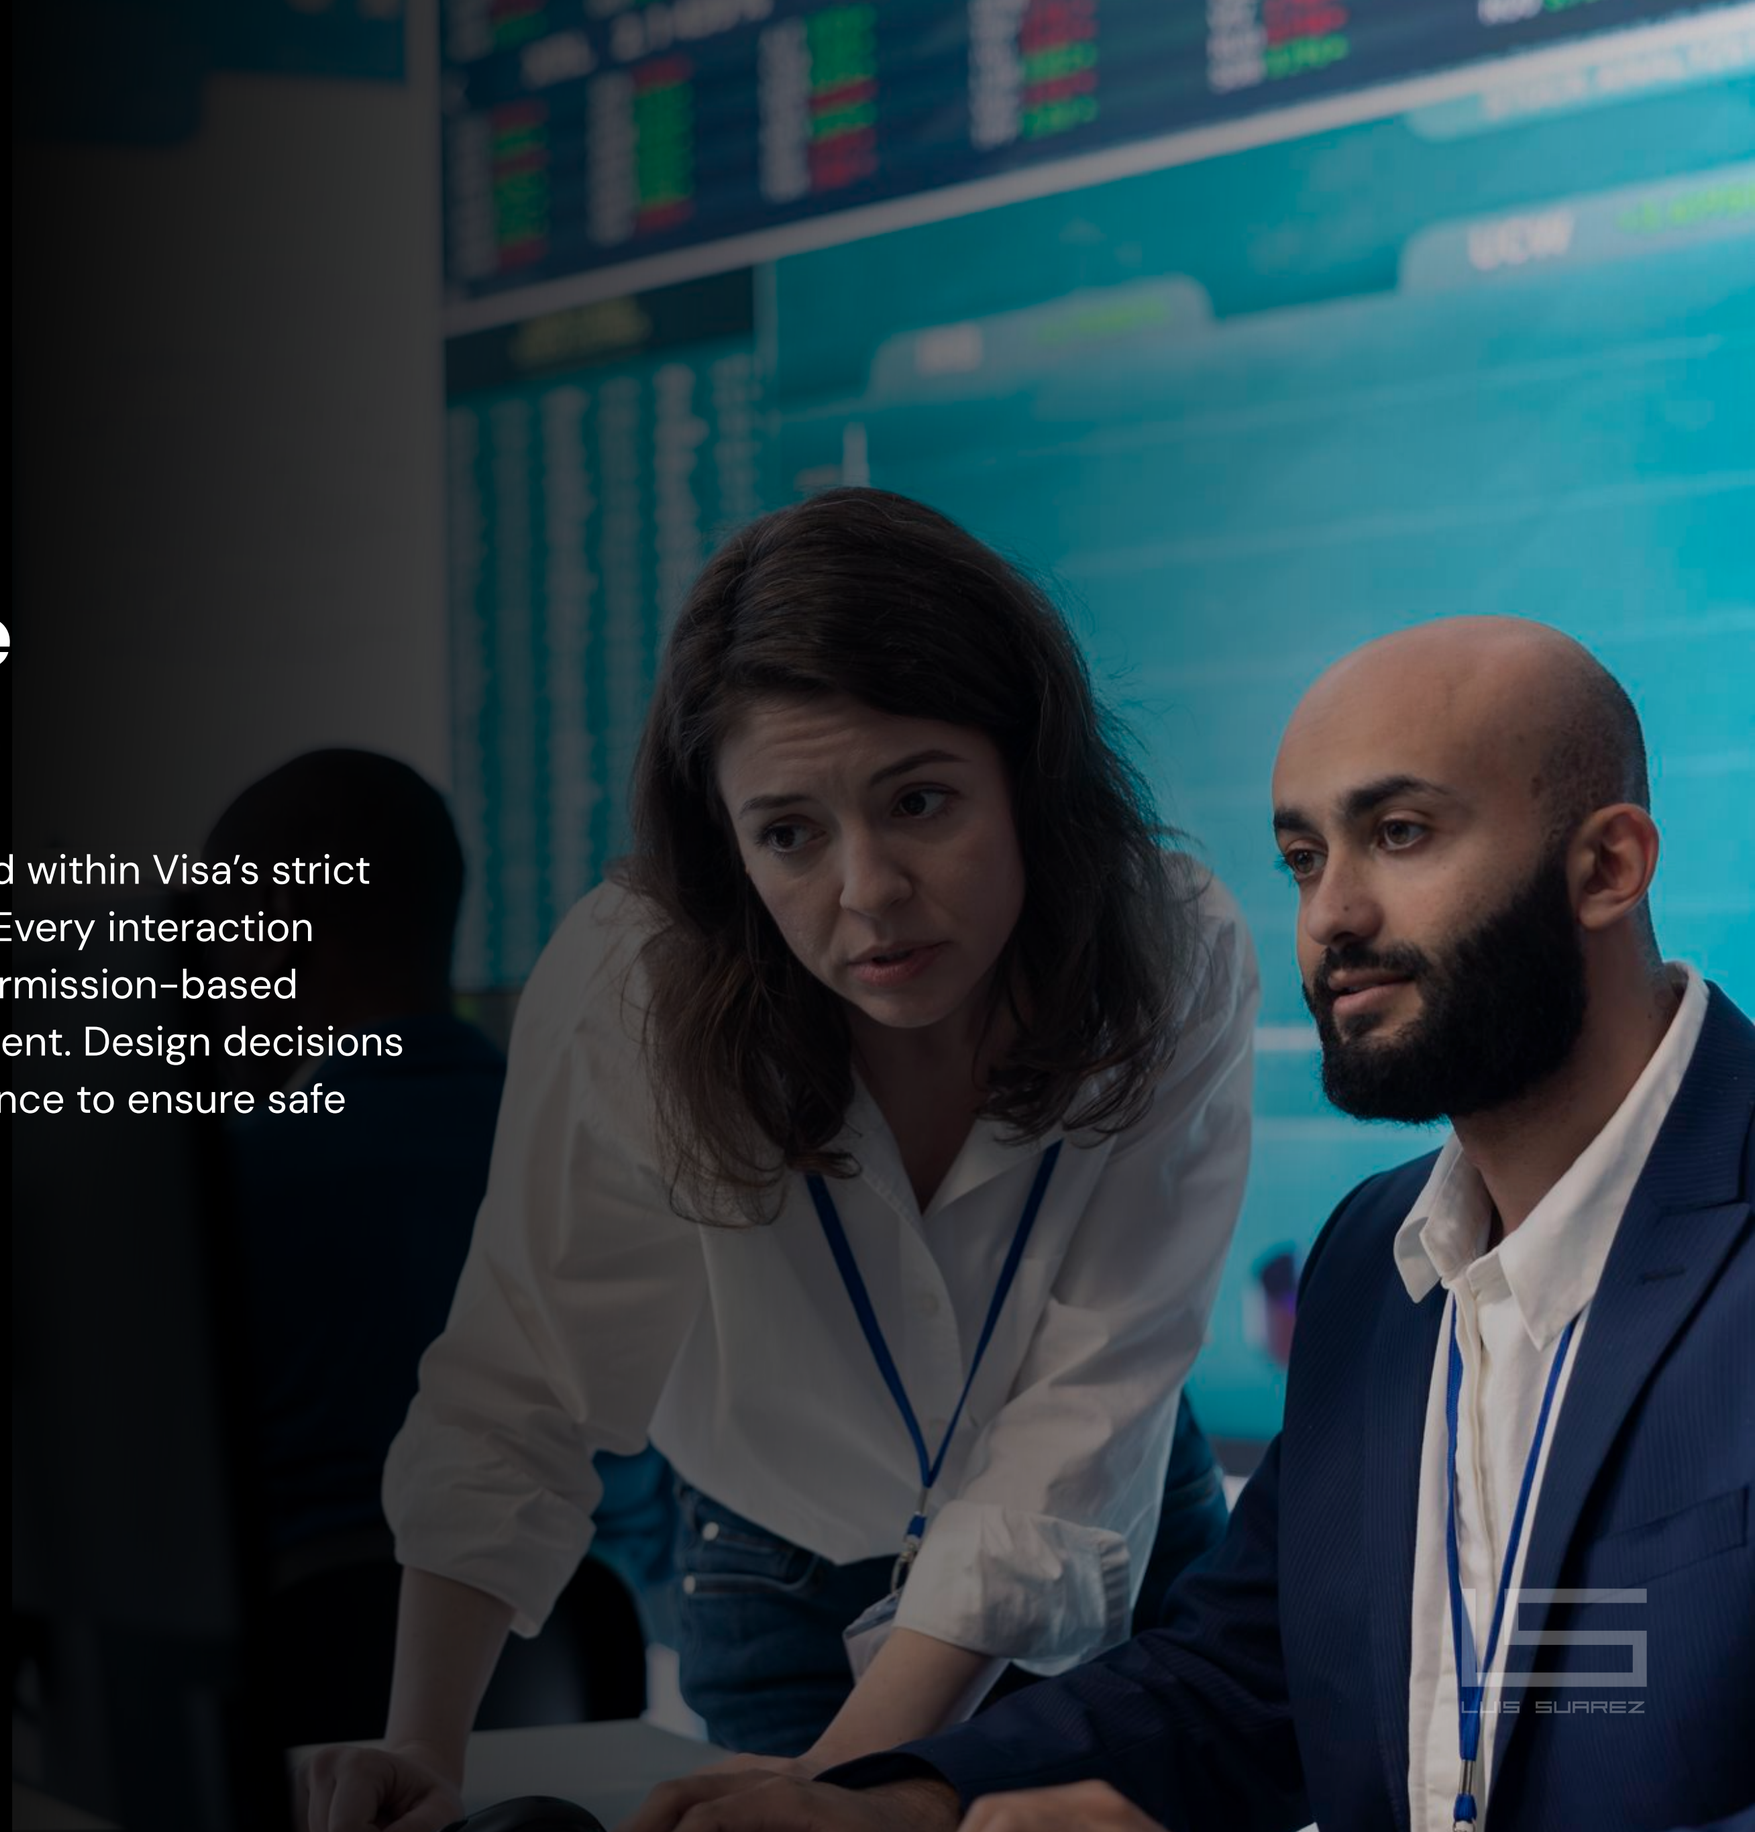
Design ownership focused on interaction models and decision flows; engineering handled system implementation.



LUIS SUAREZ

Security & Compliance Constraints

All UX solutions were designed within Visa's strict financial security framework. Every interaction required audit traceability, permission-based control, and regulatory alignment. Design decisions balanced speed with governance to ensure safe operational behavior at scale.



IMPACT

- Active user sessions increased by 15%
- Improved mobile-aligned approval behavior following the redesign of per-transaction decision flows.
- Reduced friction in transaction discrepancy handling
- Strengthened compliance-aligned approval workflows

What I learned

This project strengthened my ability to design decision-critical interfaces under regulatory constraints while balancing speed and risk.
